Abstract

Royal Rooftop Club is a private member-only project club consisting of innovative technologists, bringing exclusive NFTs and metaverse projects ever witnessed in Dubai to interested investors worldwide. Our NFTs is a collection of 2775 Arts with 101 DOUBLE AGENT traits involving undisclosed Dubai's finest billionaires. Royal Rooftop Club NFTs platform was developed out of the demand from some notable billionaires in Dubai who wish to participate in the NFTs industry. Our NFTs consist of limited NFT collection where the token doubles and serves as holders membership to a metaverse portal where they will have access to rooftop clubs, auctions, royalty investment and meetings in the metaverse

One of our unique NFTs collection features our spirit animal holding a unique Dubai plate number. The lower the plate number on a NFT, the more valuable it is on NFTs marketplace like Opensea. Holders of our NFTs have a direct key to the metaverse world and participate in Dubai's first hottest rooftop party, auctions, and investment meetings. Other benefits include; access to purchase penthouses within the skyscrapers and other VIP services to be announced accordingly after the activation of our project phase 3. Royal rooftop club aimed to give equal opportunities to investors and entrepreneurs to build wealth in the metaverse. Also, the Royal Rooftop club allows artists to tender their NFTs idea to our team to develop and launch for them. Our team of experts will scrutinize the project idea and consider if it meets our standards.

The Royal rooftop club team and the artist will sign terms and agreements. Musicians holding our NFTs can organize musical concerts in our metaverse and sell their tickets to our NFTs holders based on the terms and conditions signed with our team members.

Introduction

The world is witnessing drastic changes and diversifying wealth creation. Virtually all sectors of the world economy have witnessed an improvement from the last decade. The financial industry has been transformed from centralized to decentralized due to the introduction of DeFi projects. The real estate sector has witnessed transformation as properties can be bought and traded in the metaverse.

The rise of NFTs (non-fungible tokens) has made it possible to represent items digitally. The NFTs world has been witnessing increasing digital asset collectors since Beples every day 5,000 pixeled collection was sold for \$69 million. NFTs market cap suddenly hijacked from \$100 million in 2020 to \$22 billion in 2021. This has clearly shown the ever-increasing adoption of NFTs.

What is NFTs

NFT (non-fungible-token), unlike fiat and cryptocurrencies, which can be traded for one another; for example, 1 USD is always equal to another 1 USD. Still, an NFT is not equal to another because they have different digital signatures that make it impossible to exchange. NFTs in the form of a piece of artwork can be downloaded online by anybody, but they confer ownership to an individual.

NFTs can be inform of Artwork, music, video, GIFs, animations, and in-game items. NFTs represent blockchain-based digital assets that can be bought or sold using any form of cryptocurrency.

Metaverse

The term metaverse could be attributed to Neal Stephenson, where he envisioned a life similar to that of the 3D avatar in his book "Snow Crash" in 1992. Since then, various researches have begun on creating a world in the 3D realm featuring virtual world, augmented reality, and other means of communication. Replica of this envisioned world has been demonstrated in online games like Fortnite, Roblox, and Minecraft.

However, metaverse is referred to the continuation of real-life activities in the visual environment; this is made possible through the combination of technologies like virtual reality, augmented reality, and other forms of communication to travel, hold meetings, amongst others. For example, landed properties can be bought, developed, and sold in the metaverse, buying items from a grocery store and resold in another.

Our Vision

Our vision is to give young entrepreneurs, artists, and anyone in the world a chance to build their wealth in the Dubai metaverse starting with all equal royalty. This is done by ensuring that everyone gets the same mint price. So some may land plate number 1 with insane rarity; some may land 2765; they all pay the same price.

Our Mission

We are committed to making the metaverse accessible to entrepreneurs and investors around the world. This will be done through the introduction of our unique NFTs, which gives our holders access to the metaverse to hold meetings, participate in car auctions, watch auctions, attend first-ever virtual rooftop party and be able to purchase penthouses within the skyscrapers in our metaverse.

Royal Rooftop Club NFTs and Metaverse project.

Royal Rooftop Club NFTs include our spirit animal's unique trait, "Cheetah," holding Dubai plate numbers. The general knowledge of plate numbers in Dubai is that a single number symbolizes wealth, prestige, status for the A-list. "His Highness Sheikh Mohammed (Prime Minister of the United Arab Emirates and Ruler of Dubai owns number 1 and the latest owner of the trendy luxury piece, Balwinder Sahni "Abu Sabah" got this special number 5 after rounds of fierce bidding and was acquired for \$9 million for one of his 6 luxury Rolls Royce vehicles. The recognition that comes with Dubai's plate number is not applicable in the Royal rooftop club. Anyone who gets the NFT with plate number one (1) will pay the same amount as one who gets 250. The only advantage the holder of plate number 1 NFT has over others is when selling off the NFT on NFTs platform like Opensea, which might attract the attention of high net-worth individuals. But on the Royal rooftop club, all our NFTs holders are given the same privileges.

Artists and individuals that hold our NFTs are permitted to submit their NFTs project idea to our team for deliberation; music artists can hold musical concerts in our rooftop clubs while selling their tickets as NFTs to other Royal rooftop private club members. In addition, with the world's first double rarity NFTs ranking you will be granted access to a wide array of utilities in our metaverse such as; attending a musical concert, parties in any of our rooftop clubs, participating in a car auction, access to buy penthouses in our skyscrapers, and various benefits that will be announced in the future. Your portal to the metaverse is here. As an NFT holder, your utility awaits.

Whitelists

The first (fifty) 50 members to join our discord page get whitelisted. After that, other whitelist spots will be given away in the discord, followed by some stipulated conditions. So what is a whitelist, and how does it work?

Whitelisting is the process through which a wallet address is approved prior to minting, indicating that they will be allowed to sign in and acquire the specified NFT on the specified date. As a result, our whitelisted members will be able to mint up to to (2) NFTs for a lower price as opposed to the general minting, which will only mint one (1) NFTs

Why is this important?

- Whitelist are significantly given to collectors to prevent them from gas fee wars. For example, collectors that have been whitelisted can purchase the NFT across 24 hours as opposed to everyone minting all at once, which drives the transaction prices up. Subsequently, a whitelist means lower gas prices.
- They give equal opportunity, meaning collectors who would be priced out due to gas will get a chance via the whitelist.
- Whitelists help build communities in an organic way where bots cannot hack the system.

How do you get whitelisted?

You can get whitelisted for projects in several ways, and it usually involves active participants.

- To get whitelisted, you have to join early, usually through a project's discord. Projects often set a number where the first 50 members are whitelisted; anyone who joins after this will not be whitelisted.
- Some projects make their members earn a whitelist spot by setting them the task of inviting other members; once they invite a certain number, they will be whitelisted.
- Projects may even conduct raffles, and those who win will receive the whitelist spots.

Partnership & Collaboration

Royal rooftop private club collaborates with artists, musicians, and entrepreneurs with NFTs or metaverse project idea. Our team of experts will be available to accommodate project ideas from the individuals mentioned above; after a series of analysis, projects get developed provided it meets our required standards. We remain Dubai's first portal to host famous artist/singer NFT utility, with double VIP access to hosting metaverse concerts and create VIP backstage access to those who hold an artist NFT. Consult your project with us to get approval for collaboration.

Undisclosed Current partnership

- Dubai's Hottest Hotel Rooftop Clubs (2 out of 4 completed and signed partnership)
- Dubai's very own Billionaire entrepreneurs (3 out of 5 completed and signed partnership)
- Artists, Singers, DJs, Venues and Management groups (2 out of 6 completed and signed partnership)

Development 2.0

Undoubtedly, the web is one of the few fully cross-platform tools; creating a virtual reality (VR) app with JavaScript will work on any VR system. Therefore, only a few relevant and up-to-date technologies must be used to create VR websites.

- We'll be utilizing Aframe.io, a library for rendering and VR scenes with some basic HTML and Javascript. Three. Js, which Aframe.io supports, may be used to create more sophisticated visuals.
- We will be utilizing WebXR, a Mozilla-developed library that allows interaction with web-based VR.

Welcome aboard
